SUMMARY

I build scalable frontend systems and lead product development for enterprise SaaS platforms. As Founder & CTO of CenVexa, I'm building an AI-powered supply chain forecasting platform from the ground up — architecting multi-tenant SaaS infrastructure, designing component systems, and shipping production software across web and mobile. Published researcher with globally-cited work on scalable frontend architectures, component reusability, and AI-assisted development workflows. 6+ years building enterprise UI systems at scale (Medline, Bank of America, Dun & Bradstreet), with full-stack product ownership from system architecture to CI/CD to customer-facing features, and deep expertise in accessibility (WCAG/ARIA), design systems, and developer productivity.

CORE SKILLS

System Architecture | Multi-Tenant SaaS Design | React | TypeScript | Next.js | Angular | Python | Design Systems | Component Libraries | WCAG / ARIA Accessibility | CI/CD (Azure DevOps, Jenkins) | Cloud Infrastructure | API & Database Design | Technical Strategy & Leadership

EXPERIENCE

CenVexa — Founder & CTO

Jan 2026 – Present · Chicago, IL

- Building an AI-powered supply chain forecasting and enterprise planning platform from the ground up as a solo technical founder, wearing every hat: architect, developer, designer, DevOps engineer, and product owner.
- Architected multi-tenant SaaS infrastructure with role-based access control, tenant isolation, and scalable database design.
- Own the full stack: frontend platform, backend services & APIs, authentication/authorization, email and cloud infrastructure, and CI/CD pipelines with production monitoring.
- Designed a shared component library and design system for consistent UX across web and mobile products.
- Shipping simultaneously across Supply Chain Infonomics (B2B forecasting) and the underlying multi-tenant SaaS platform, while owning product strategy and roadmap.

Medline Industries, LP — Developer Analyst

Jan 2022 – Jan 2026 · Chicago, IL

- Architected modular, reusable React components with full WCAG/ARIA compliance, improving accessibility scores and keyboard navigation across flagship products.
- Led development of Medline's UI libraries (UiLine and React Component Library), standardizing UI/UX workflows and driving org-wide adoption of the internal UI Kit.
- Led integration of Ag-Grid data tables with TypeScript, reducing rendering time and improving data handling for large datasets.
- Implemented CI/CD pipelines (Azure DevOps, Jenkins) to automate testing and deployment; solo-owned critical projects from requirements through production.
- Established frontend best practices and design system standards adopted team-wide, accelerating development cycles through standardized tooling.

Bank of America — UI Developer Jul 2020 – Dec 2021 · New Jersey

- Analyzed and implemented UI designs using HTML5, CSS3, jQuery/JavaScript, and AngularJS; executed SIT/UAT test cases with real-time data and wrote JUnit, Jasmine, and Karma tests.

Dun & Bradstreet — UI Developer Jan 2019 – Jun 2020 · Center Valley, PA

- Revamped a production application from AngularJS 1.9 to Angular 11, improving data binding and SPA performance using Angular CLI, forms, services, and pipes.

Anthem Inc. — UI Developer Aug 2018 – Dec 2018 · Norfolk, VA

- Built responsive single-page applications with AngularJS, HTML5, SCSS, and JavaScript; created custom directives and integrated APIs via the $http service.

SQA Labs — Software Developer Apr 2018 – Jul 2018 · Phoenix, AZ

- Designed prototypes using Axure, Photoshop, and Illustrator; implemented production-ready UI with JavaScript, jQuery, HTML, and CSS.
